

Re NAB's petition 04-160. Let broadcast radio compete with satellite radio if it wants to, but don't let it stifle satellite radio. I rely on XM radio for its local traffic and weather forecasts. Unlike commercial radio, XM's information is always at the ready. I will not be bullied by NAB into again wading thru all manner of commercial entreaties before I can get this information. Satellite radio offers an alternative, a better one. I pay for it and I should be able to continue to receive it without the intervention of a bunch of radio monopolists.
